Initiation and Flame Propagation in Combustion of Gases and Pyrophoric Metal Nanostructures

Series: Fluid Mechanics and Its Applications

- Presents practical applications of gas and solid combustion
- Contains chapters on catalysis using noble metals
- Highlights new theory of combustion and preservation of pyrophoric nanopowders

This book presents new data on combustion processes for practical applications, discussing fire safety issues in the development of flame arresters and the use of noble metals in hydrogen recombiners for nuclear power plants. It establishes the basic principles of production of metal nanostructures, namely nanopowders of metals and compact products made of them, with the preservation of the unique properties of nanoproducts.
